

A

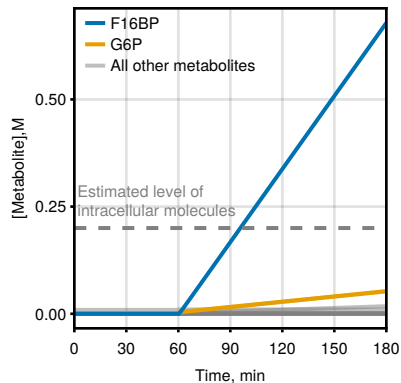

B

[Metabolite] changes in response to removal of HK and PFK allosterity without Pi uptake

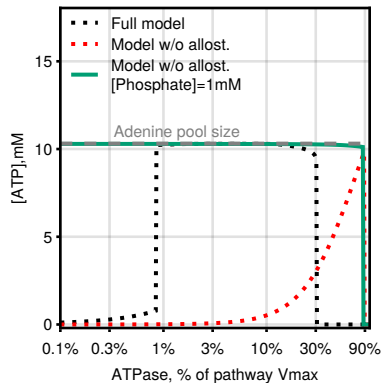

C

[Metabolite] changes in response to removal of HK and PFK allosterity with Pi uptake

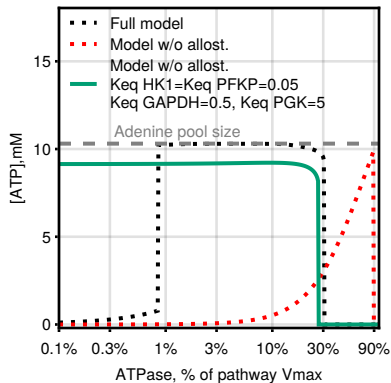

D

Metabolite concentration changes with constant [Phosphate]

E

Maintaining ATP concentration with lower Keq for HK1, PFKP, GAPDH, and PGK reactions

F

Maintaining ATP concentration with $V(HK1)=V(PFKP)=0.5V(ATPase)$
